Einsätze 01. Mai bis 31. Juli

- **Prevention --- a part of the game**

- avoid risk
- prevent dangers
- situation awareness

- Definition of prevention work (*in mountain rescue services*)
 - *Assignment - possibilities and limits;*
- Suitable organizational unit for prevention work

• An example:

- **avalanche training center (ATC)**

The ATC Avalanche Training Center is a stationary system for training transceiver and probe search. The system can simulate from five to sixteen transceivers. The transmitters that are buried in the search area emit signals that are exactly equal to the signals from real avalanche transceivers.

At the control unit, the remotely controlled transmitters can be selected at random (standard mode) or individually (expert mode). This allows for training simple as well as complex (multiple burials) burial situations.

- Open to the public – for free
 - Connected to the infrastructure
 - Accessible to school and other facilities;
-
- workshops for free, in combinations with alpine clubs, mountain guides, skischools, elementary school
